Preface

This preface as well as all footnotes and annexes are included for informational purposes and are not part of ANSI/ISA-S75.19.

This standard has been prepared as part of the service of ISA, the international society for measurement and control, toward a goal of uniformity in the field of instrumentation. To be of real value, this document should not be static, but should be subject to periodic review. Toward this end, the Society welcomes all comments and criticisms, and asks that they be addressed to the Secretary, Standards and Practices Board; ISA; 67 Alexander Drive; P. O. Box 12277; Research Triangle Park, NC 27709; Telephone (919) 990-9227; Fax: (919) 549-8288; e-mail: standards@isa.org.

The ISA Standards and Practices Department is aware of the growing need for attention to the metric system of units in general and the International System of Units (SI) in particular, in the preparation of instrumentation standards, recommended practices, or technical reports. The Department is further aware of the benefits to U.S.A. users of ISA standards of incorporating suitable references to the SI (and the metric system) in their business and professional dealings with other countries. Toward this end, this Department will endeavor to introduce SI-acceptable metric units in all new and revised standards to the greatest extent possible. *The Metric Practice Guide*, which has been published by the Institute of Electrical and Electronics Engineers as ANSI/IEEE Std. 268-1992, and future revisions, will be the reference guide for definitions, symbols, abbreviations, and conversion factors. Certain metric units that are part of the SI system are in common accepted pressure measurement that is convertible to kilopascals by multiplying by 100.

It is the policy of ISA to encourage and welcome the participation of all concerned individuals and interests in the development of ISA standards. Participation in the ISA standards-making process by an individual in no way constitutes endorsement by the employer of that individual, of ISA, or of any of the standards that ISA develops.

1 Scope

1.1 This standard applies to control valves having bodies, bonnets, cover plates, and bottom flanges made of carbon steel, low alloy and high alloy (stainless) steel, nickel-base alloy, cast iron, and ductile iron.

1.2 This standard establishes requirements and definitions for standard hydrostatic shell testing of control valves by the valve manufacturer to prove the structural integrity and leak tightness of the valves' pressure retaining parts, including any closure parts such as the valve body to bonnet joint, but excluding packings, bellows or other moving seals and packing leakoff connections. Bellows or similar moving stem seals may be pressure tested after assembly at a pressure to be agreed upon by the valve manufacturer and the purchaser. The requirements of this standard do not cover pneumatic and hydraulic actuators and regulators.

1.3 This standard describes and specifies the specific circumstances of hydrostatic shell testing of control valves and is in accordance with the hydrostatic testing requirements of ASME/ANSI B16.1, ASME/ANSI B16.34 and ASME/ANSI B16.42 with the exception that the test requirements of paragraph 4.8 are not allowed by ASME/ANSI B16.34.

1.4 **WARNING — Serious bodily harm can be caused by high velocity leaks through the shell or seals, resulting from the energy stored in the pressurized fluid and containment equipment. Care should be exercised to ensure the safety of test and inspection personnel. Specific safety requirements for conducting hydrostatic testing and inspection are not within the scope of this standard.**

2 Definitions

2.1 **control valve:** Refer to ISA-S75.05, "Control Valve Terminology."

2.2 **test fixture:** A test fixture is a device to close off the end connections and/or stem seal areas of the control valve to allow pressurization for hydrostatic shell testing.

3 Test fixture and instrumentation

3.1 Test fixtures include, but are not limited to the following: plugs with tie-bars and tie-rods, hydraulic presses, plugs or flanges attached to the pipe connections, bosses or lugs on the valve, and expandable rubber plugs. For butt welding end valves when end plugs are used, the seal point shall be as close to the weld end as practical without overstressing the weld preparation.

3.2 The analog or digital pressure measuring instruments used in testing shall be of the indicating or recording type.

3.3 The valve manufacturer shall be responsible for maintaining the accuracy of the pressure measuring instruments.

3.4 Pressure measuring instruments shall be accurate within 3% at test pressure, and analog-type shall be used between 20% and 80% of their scale range.

4 Test requirements

4.1 The control valve, with or without its actuator, must be complete before hydrostatic shell testing, except as permitted in 4.2, 4.3, 4.4, and 4.8.

4.2 It is permissible to disassemble the valve after hydrostatic shell testing, provided

- a) new gaskets or seals used to reassemble the valve are of the same kind and size;
- b) equivalent studs and nuts are used;
- c) the same torquing procedure is used, or steps are taken to ensure the same pre-test bolt loads result; and
- d) an air or water leak test at lower than the hydrostatic shell test pressure is performed to ensure proper gasket installation.

4.3 All cavities pressurized in service shall simultaneously be subjected to the hydrostatic shell test pressure. Moving stem seals such as bellows, diaphragms, stem, and packing, that may be damaged by the hydrostatic shell test pressure, or trim parts that do not affect the pressure boundary, need not be installed during testing.

4.4 Valves with welded-on nipples, flanges, reducers and/or increasers shall be hydrostatically shell tested in accordance with paragraph 4.4 (a) or (d), at the manufacturer's option, unless paragraph 4.4 (b) or (c) is agreed to by both the valve manufacturer and the purchaser.

- a) Hydrostatically shell test the valve alone at the appropriate pressure for its class and do not retest after welding on any of the nipples, flanges, reducers or increasers.
- b) Hydrostatically shell test the valve alone at the appropriate pressure for its class and retest the valve assembly after welding on any of the nipples, flanges, reducers or increasers with the pressure in accordance with the specification applicable to the nipples, flanges, reducers or increasers. The purchaser shall provide the design pressure and temperature and the applicable specifications to the valve manufacturer.
- c) Hydrostatically shell test the valve including all weld-on nipples, flanges, reducers and increasers with the pressure in accordance with the specification applicable to the nipples, flanges, reducers and increasers. The valve nameplate and required valve body marking must then indicate the pressure and temperature limit as determined by the nipples, flanges, reducers and increasers.
- d) Hydrostatically shell test the valve including all welded-on nipples, flanges, reducers, and increasers with the pressure in accordance with this standard, provided that the nipples, flanges, reducers and increasers are adequate for that pressure.

4.5 The valve shall not be painted or otherwise coated with materials capable of sealing against leakage before the shell tests are completed, except internal linings or coatings included in the design (e.g., nonmetallic butterfly valve body linings) are permitted. Chemical corrosion protection treatments are permitted. If valve parts are to be painted for storage, they shall be hydrostatically shell tested before painting, provided the fully assembled valve is again tested in accordance with paragraph 4.2 (d). If the presence of purchaser's representative is specified for hydrostatic shell tests, painted valves may be retested without removal of the paint, unless otherwise agreed to by the valve manufacturer and purchaser.

Wrought welded-on nipples, flanges, increasers and reducers need not have their protective coating removed for hydrostatic shell testing.

4.6 The valve shall not be seated on the main seat nor on the back seat during the hydrostatic shell test.

4.7 If a valve is dual pressure rated (inlet rating higher than outlet rating from causes such as different wall thicknesses, flange rating, or materials), it may be necessary to separate the high pressure portion of the valve from the low pressure portion with a temporary barrier and test each portion at its respective pressure.

4.8 Pressure retaining parts may be hydrostatically shell tested separately if all of the following conditions are satisfied:

- a) all the pressure retaining parts in the valve assembly are hydrostatically tested at the pressures in accordance with [section 7](#), "Test Pressures;"
- b) the hydrostatic test is performed in a manner that simulates all loadings, fasteners, and restraints present when the part is tested in a completed valve;
- c) individual part testing is agreed to by both the manufacturer and the purchaser; and
- d) the fully assembled valve is pressure tested in accordance with paragraph 4.2 (d).

5 Test procedures

5.1 After filling the valve with water, which may contain a corrosion inhibitor, or with other suitable liquid (provided such liquid has a viscosity not greater than water), and venting all air, each valve shall be pressurized to no less than the pressures given in [Table 2](#) or [Table A.1](#), except as covered in paragraph 7.4.

CAUTION — IF AIR IS PRESENT IN THE TEST FLUID, THERE ARE HAZARDS INVOLVED AND APPROPRIATE PRECAUTIONS SHOULD BETAKEN.

5.2 The minimum duration of test pressure before start of inspection shall be as follows:

**Minimum Test Duration
(minutes)**

Nominal Valve Size	Class 150 & Lower	Class 250 thru 600	Class 900 thru 1500	Class 2500 & Higher
2" & Smaller	1	1	2	3
2-1/2 " thru 4"	2	2	4	5
5 " thru 8"	2	3	5	8
10" & Larger	3	5	8	10

For classes not shown, use next higher class.

5.3 The temperature of the test liquid shall not exceed 52°C (125°F).

6 Acceptance standards

6.1 Any visually detected weeping or leaking through the pressure boundary walls that are part of the valve body assembly shall be cause for rejection. Leakage through the static seals and gasketed joints is also cause for rejection unless specifically allowed by the design specifications.

6.2 Distortion due to hydrostatic shell testing that impairs satisfactory functional operation of the valve shall be cause for rejection.

7 Test pressures

7.1 Hydrostatic shell test pressures for steel and nickel-base alloy valves are calculated by multiplying the 38°C (100°F) working pressures by 1.5 and rounding off to the next higher 25 psig (pounds per square inch gage) increment in accordance with ASME/ANSI B16.34. For other materials within the scope of this standard but not listed in [Table 1](#), and for Intermediate and Limited Classes, the above method shall be used to determine the test pressure.

7.2 Hydrostatic shell test pressures for cast iron valves shall be in accordance with ASME/ANSI B16.1.

7.3 Hydrostatic shell test pressures for nodular (ductile) iron valves shall be in accordance with ASME/ANSI B16.42.

7.4 For other materials within the scope of this standard but not included in [Tables 1, 2, or A.1](#) and whose pressure ratings are given in a published standard or are determined by the manufacturer, the hydrostatic shell test pressures shall be calculated as in paragraph 7.1 or paragraph 7.5, as applicable.

7.5 The metric equivalents of all test pressures in [Table 2](#) are given in [Table A.1](#) (Annex A) and are calculated by converting 1.5 times the 38°C (100°F) working pressure in psig to bar and then rounding off to the next higher bar increment except for values below 10 bar which are rounded off to the next higher 0.1 bar increment^(a).

^(a) 1 bar = 100 kPa = 100,000 Pa = 0.1 MPa = 14.5038 psi.

Piping Components

ASTM A106-91 Standard Specification for Seamless Carbon Steel Pipe
for High-Temperature Service

ASTM A126-84 Standard Specification for Gray Iron Castings for
Valves, Flanges and Pipe Fittings

ASTM A182/A182M-93 Standard Specification for Forged or Rolled Alloy-
Steel Pipe Flanges, Forged Fittings, and Valves and
Parts for High-Temperature Service

ASTM A203/A203M-93	Standard Specification for Pressure Vessel Plates; Alloy Steel, Nickel
ASTM A204/A204M-93	Standard Specification for Pressure Vessel Plates, Alloy Steel, Molybdenum
ASTM A216/A216M-89	Standard Specification for Steel Castings, Carbon Suitable for Fusion Welding for High-Temperature Service
ASTM A217/A217M-91	Standard Specification for Steel Castings, Martensitic Stainless and Alloy, for Pressure-Containing Parts Suitable for High-Temperature Service
ASTM A240 REV A-93	Standard Specification for Heat-Resisting Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels
ASTM A302/A302M-93	Standard Specification for Pressure Vessel Plates, Alloy-Steel, Manganese-Molybdenum and Manganese-Molybdenum-Nickel
ASTM A312/A312M REV A-92	Standard Specification for Seamless and Welded Austenitic Stainless Steel Pipe
ASTM A335/A335M REV B-92	Standard Specification for Seamless Ferritic Alloy-Steel Pipe for High-Temperature Service
ASTM A350/A350M-93	Standard Specification for Forgings, Carbon and Low-Alloy Steel, Requiring Notch Toughness Testing for Piping Components
ASTM A351/A351M REV B-91	Standard Specification for Castings, Austenitic, Austenitic-Ferritic (Duplex), for Pressure-Containing Parts
ASTM A352/A352M-92	Standard Specification for Steel Castings, Ferritic and Martensitic, for Pressure-Containing Parts, Suitable for Low-Temperature Service
ASTM A358/A358M-92	Standard Specification for Electric-Fusion-Welded Austenitic Chromium-Nickel Alloy Steel Pipe for High-Temperature Service
ASTM A369/A369M-92	Standard Specification for Carbon and Ferritic Alloy Steel Forged and Bored Pipe for High-Temperature Service

ASTM A376/A376M REV A-91	Standard Specification for Seamless Austenitic Steel Pipe for High-Temperature Central-Station Service
ASTM A387/A387M-92	Standard Specification for Pressure Vessel Plates, Alloy Steel, Chromium-Molybdenum
ASTM A395-88	Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures
ASTM A430/A430M-91	Standard Specification for Austenitic Steel Forged and Bored Pipe for High-Temperature Service
ASTM A479/A479M-92	Standard Specification for Stainless and Heat-Resisting Steel Bars and Shapes for Use in Boilers and Other Pressure Vessels
ASTM A515/A515M-92	Standard Specification for Pressure Vessel Plates, Carbon Steel, for Intermediate-and Higher-Temperature Service
ASTM A516/A516M-90	Standard Specification for Pressure Vessel Plates, Carbon Steel, for Moderate-and Lower-Temperature Service
ASTM A537/A537M-90	Standard Specification for Pressure Vessel Plates, Heat-Treated, Carbon-Manganese-Silicon Steel
ASTM A672 REV B-89	Standard Specification for Electric-Fusion-Welded Steel Pipe for High-Pressure Service at Moderate Temperatures
ASTM A675/A675M REV A-90	Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality, Mechanical Properties
ASTM A691 REV A-89	Standard Specification for Carbon and Alloy Steel Pipe, Electric-Fusion-Welded for High-Pressure Service at High Temperatures
ASTM A696 REV A-90	Standard Specification for Steel Bars, Carbon, Hot-Wrought or Cold-Finished, Special Quality, for Pressure Piping Components
ASTM A739 REV A-90	Standard Specification for Steel Bars, Alloy, Hot-Wrought, for Elevated Temperature or Pressure-Containing Parts

ASTM B127-93	Standard Specification for Nickel-Copper Alloy (UNS N04400) Plate, Sheet, and Strip
ASTM B160-93	Standard Specification for Nickel Rod and Bar
ASTM B161-93	Standard Specification for Nickel Seamless Pipe and Tube
ASTM B162-93	Standard Specification for Nickel Plate, Sheet, and Strip
ASTM B163-93	Standard Specification for Seamless Nickel and Nickel Alloy Condenser and Heat-Exchanger Tubes
ASTM B164-93	Standard Specification for Nickel-Copper Alloy Rod, Bar, and Wire
ASTM B165-93	Standard Specification for Nickel-Copper Alloy (UNS N04400) Seamless Pipe and Tube
ASTM B166-93	Standard Specification for Nickel-Chromium-Iron Alloys (UNS N06600, NO6601 and NO6690) and Nickel-Chromium-Cobalt-Molybdenum Alloy (UNS NO6617) Rod, Bar, and Wire
ASTM B167-93	Standard Specification for Nickel-Chromium-Iron Alloys (UNS N06600, NO6601 and N06690) Seamless Pipe and Tube
ASTM B168-93	Standard Specification for Nickel-Chromium-Iron Alloys (UNS N06600, UNO6601 and N06690) and Nickel-Chromium-Cobalt-Molybdenum Alloy (UNS NO6617) Plate, Sheet, and Strip
ASTM B333-92	Standard Specification for Nickel-Molybdenum Alloy Plate, Sheet, and Strip
ASTM B335-89	Standard Specification for Nickel-Molybdenum Alloy Rod
ASTM B407-93	Standard Specification for Nickel-Iron-Chromium Alloy Seamless Pipe and Tube
ASTM B408-87	Standard Specification for Nickel-Iron-Chromium Alloy Rod and Bar
ASTM B409-93	Standard Specification for Nickel-Iron-Chromium Alloy Plate, Sheet, and Strip

ASTM B434-89	Standard Specification for Nickel-Molybdenum-Chromium-Iron Alloy (UNS N10003) Plate, Sheet, and Strip
ASTM B435-93	Standard Specification for UNS N06002, UNS N06230, and UNS R30556 Plate, Sheet, and Strip
ASTM B443-93	Standard Specification for Nickel-Chromium-Molybdenum-Columbium Alloy (UNS N06625) Plate, Sheet, and Strip
ASTM B446-93	Standard Specification for Nickel-Chromium-Molybdenum-Columbium Alloy (UNS N06625) Rod and Bar
ASTM B462-91	Standard Specification for Forged or Rolled UNS N08020, UNS N08024, UNS N08026 and UNS N08367 Alloy Pipe Flanges, Forged Fittings, and Valves and Parts for Corrosive High-Temperature Service
ASTM B463-93	Standard Specification for UNS N08020, UNS N08026, and UNS N08024 Alloy Plate, Sheet, and Strip
ASTM B464-93	Standard Specification for Welded UNS N08020, N08024, and N08026 Alloy Pipe
ASTM B468-93	Standard Specification for Welded UNS N08020, N08024 and N08026 Alloy Tubes
ASTM B473-91	Standard Specification for UNS N08020, UNS N08026 and N08024 Nickel Alloy Bar and Wire
ASTM B511-93	Standard Specification for Nickel-Iron-Chromium-Silicon Alloy Bars and Shapes
ASTM B535-87	Standard Specification for Nickel-Iron-Chromium-Silicon Alloy (UNS N08330 and UNS N08332) Seamless Pipe
ASTM B536-93	Standard Specification for Nickel-Iron-Chromium-Silicon Alloys (UNS N08330 and N08332) Plate, Sheet, and Strip
ASTM B564-93	Standard Specification for Nickel Alloy Forgings
ASTM B572 REV A87	Standard Specification for UNS N06002, UNS N06230, and UNS R30556 Rod

ASTM B573-89	Standard Specification for Nickel-Molybdenum-Chromium-Iron Alloy (UNS N10003) Rod
ASTM B574-91	Standard Specification for Low-Carbon Nickel-Molybdenum-Chromium and Low-Carbon Nickel-Chromium-Molybdenum Alloy Rod
ASTM B575-92	Standard Specification for Low-Carbon Nickel-Molybdenum-Chromium and Low-Carbon Nickel-Chromium-Molybdenum Alloy Plate, Sheet, and Strip
ASTM B581-93	Standard Specification for Nickel-Chromium-Iron-Molybdenum-Copper Alloy Rod
ASTM B582-92	Standard Specification for Nickel-Chromium-Iron-Molybdenum-Copper Alloy Plate, Sheet, and Strip
ASTM B599-92	Standard Specification for Nickel-Iron-Chromium-Molybdenum-Columbium Stabilized Alloy (UNS N08700) Plate, Sheet, and Strip
ASTM B620-93	Standard Specification for Nickel-Iron Chromium-Molybdenum Alloy (UNS N08320) Plate, Sheet, and Strip
ASTM B621-89	Standard Specification for Nickel-Iron-Chromium-Molybdenum Alloy (UNS N08320) Rod
ASTM B622-93	Standard Specification for Seamless Nickel and Nickel-Cobalt Alloy Pipe and Tube
ASTM B625-93	Standard Specification for UNS N08904, UNS N08925, UNS N08931, UNS N08932, and UNS N08926 Plate, Sheet, and Strip
ASTM B649-73	Standard Specification for Ni-Fe-Cr-Mo-Cu Low-Carbon Alloy (UNS N08904) and Ni-Fe-Cr-Mo-Cu-N Low Carbon Alloys (UNS N08925, UNS N08031, and UNS N08926) Bar and Wire
ASTM B677-91	Standard Specification for UNS N08904, UNS N08925, and UNS N08926 Seamless Pipe and Tube

Developing and promulgating technically sound consensus standards, recommended practices, and technical reports is one of ISA's primary goals. To achieve this goal the Standards and Practices Department relies on the technical expertise and efforts of volunteer committee members, chairmen, and reviewers.

ISA is an American National Standards Institute (ANSI) accredited organization. ISA administers United States Technical Advisory Groups (USTAGs) and provides secretariat support for International Electrotechnical Commission (IEC) and International Organization for Standardization (ISO) committees that develop process measurement and control standards. To obtain additional information on the Society's standards program, please write:
